

AMERICAN INTERNATIONALUNIVERSITY-BANGLADESH

Faculty of Science and Technology

Finalterm Report

Course Title : Advanced Database Management Systems [C]

Semester : SPRING 21-22

Date of Submission : 21/04/2022

Project Name : Bangladesh Premier League (BPL) Management System

Course Teacher : REZWAN AHMED

Group Name: Shethil404

Student Name	ID	Program
Shethil Ahammed	19-39698-1	BSc [CSE]

Procedures and Functions

print details(p id);

END

1. Create a procedure to check player details where user give prayer id to see palyer Name, Role, Age, Price, Team ID & Statistic ID

```
CREATE OR REPLACE PROCEDURE print details(p id Player.PlayerID%type)
      IS
              P PlayerName Player.PlayerName%type;
              P Role Player.Role%type;
              P Age Player.Age%type;
              P Price Player. Price % type;
              P TeamID Player.TeamID%type;
             P SID Player.SID%type;
      BEGIN
             SELECT PlayerName, Role, Age, Price, TeamID, SID into P PlayerName, P Role,
             P_Age, P_Price, P_TeamID, P_SID FROM Player where PlayerID=p_id;
             DBMS OUTPUT.PUT LINE('PlayerName: '|| P PlayerName);
              DBMS_OUTPUT.PUT_LINE('Role : '||p_Role);
              DBMS OUTPUT.PUT LINE('Age: '||p Age);
              DBMS OUTPUT.PUT LINE('Price: '||P Price);
              DBMS OUTPUT.PUT LINE('TeamID: '||P TeamID);
              DBMS OUTPUT.PUT LINE('SID: '||P SID);
      END;
Declaration:
      DECLARE
             p id Player.PlayerID%type:=:Player id;
      BEGIN
```

2. Create procedure which gets the name of all the players and find out every one's role.

```
CREATE OR REPLACE PROCEDURE player_role
      IS
      BEGIN
              DECLARE
              CURSOR c
              IS
               SELECT PlayerName, Role FROM Player;
               P_PlayerName Player.PlayerName%type;
               P ROLE Player.Role%type;
               i number(3);
      BEGIN
              FOR i in c loop
              P_PlayerName:= i.PlayerName;
              P ROLE:= i.Role;
              DBMS_OUTPUT.PUT_LINE('Player Name: '||P_PlayerName);
              DBMS_OUTPUT.PUT_LINE('Role: '||P_ROLE);
              end loop;
       END;
      END;
Declaration:
      BEGIN
             player_role;
      END
```

3. Create procedure which gets specific team match schedule where user give team id.

```
CREATE OR REPLACE PROCEDURE match schedule(T ID Match.Team1ID%type)
      IS
      BEGIN
             DECLARE
             CURSOR c
             IS
              SELECT MatchID, Match date, TIME, VenueID FROM Match where
            team1ID=T ID or team2ID=T ID;
              M MatchID Match.MatchID%type;
              M Match date Match.Match date%type;
              M TIME Match.TIME%type;
              M VenuelD Match. VenuelD%type;
              i number(3);
      BEGIN
             FOR i in c loop
             M MatchID:= i.MatchID;
             M_Match_date:= i.Match_date;
             M TIME:= i.TIME;
             M VenueID:= i.VenueID;
             DBMS_OUTPUT.PUT_LINE('MatchID: '||M_MatchID);
             DBMS OUTPUT.PUT LINE('Match date: '||M Match date);
             DBMS OUTPUT.PUT LINE('TIME: '| | M TIME);
             DBMS OUTPUT.PUT LINE('VenueID: '||M VenueID);
             end loop;
       END;
      END;
Declaration:
      DECLARE
            T ID Match.Team1ID%type:=:TEAM ID;
      BEGIN
            match_schedule(T_ID);
      END
```

4. Create a function to check team owner where user give team id.

```
CREATE OR REPLACE FUNCTION owner name(T ID Owner.TeamID%type)
      RETURN Owner.OwnerName%type
      IS
            O_OwnerName Owner.OwnerName%type;
      BEGIN
            SELECT OwnerName into O_OwnerName FROM Owner where TeamID = T_ID;
            RETURN O OwnerName;
      END;
Declaration:
      DECLARE
            T ID Owner.TeamID%type:=:TEAM ID;
            O_OwnerName Owner.OwnerName%type;
      BEGIN
             O OwnerName:=owner name(T ID);
             DBMS OUTPUT.PUT LINE('OWNER NAME: '||O OwnerName);
      END
5. Create a function to see many teams paly at Bangladesh Bangladesh Premier League (BPL)
      CREATE OR REPLACE FUNCTION totalTeams
      RETURN number
      IS
            total number(2) := 0;
      BEGIN
            SELECT count(*) into total FROM Team;
            RETURN total;
      END;
Declaration:
DECLARE
c number(2);
BEGIN
 c := totalTeams();
 dbms_output.put_line('Total no. of Teamss: ' | | c);
END;
```

6. Create a function to check total number of player of a team where user give team id.

```
CREATE OR REPLACE FUNCTION total_player(T_ID Player.TeamID%type)
      RETURN number
      IS
             total number(2) := 0;
      BEGIN
             SELECT count(*) into total FROM Player where TeamID = T_ID;
             RETURN total;
      END;
Declaration:
      DECLARE
             T_ID Player.TeamID%type:=:TEAM_ID;
             c number(2);
      BEGIN
              c :=total_player(T_ID);
              DBMS_OUTPUT.PUT_LINE('Total player of this team is: '||c);
      END
```

Triggers

1. Create a trigger that preventing to deleting row from Match table.

```
CREATE OR REPLACE TRIGGER RENTALHIS_DEL
BEFORE DELETE ON Match
BEGIN
raise_application_error(-20001,'Records can not be deleted');
END;
```

2. Create a trigger that store delated data into delete_player table where data delete from player table.

```
CREATE OR REPLACE TRIGGER trigger_delete_player

BEFORE DELETE ON Player

FOR EACH ROW

BEGIN

INSERT INTO delete_player

(PlayerID,PlayerName,Role,Age,Price,TeamID,SID)

values(:old.PlayerID,:old.PlayerName,:old.Role,:old.Age,:old.Price,:old.TeamID,:old.SID);

END;
```

3. Create a trigger that occurs when ever an insert or update occurs in Match table and insert the old and new data in the update_Match table.

```
CREATE OR REPLACE TRIGGER update_Match
BEFORE UPDATE OR INSERT ON match
FOR EACH ROW
BEGIN
INSERT INTO update_Match
(MatchID,Team1ID,Team2ID,Match_date,TIME,VenueID)
values(:new.MatchID,:new.Team1ID,:new.Team2ID,:new.Match_date,:new
.TIME,:new.VenueID);
END;
```

4. Create a trigger that will not allow player below 16 years old.

```
CREATE OR REPLACE TRIGGER CheckAge

BEFORE

INSERT OR UPDATE ON player

FOR EACH ROW

BEGIN

IF :new.Age<16 THEN

raise_application_error(-20001, 'Age should be greater than 16');

END IF;

END;
```

Exception handling

1. Create a procedure by using exception to check player details where user give prayer id to see palyer Name, Role, Age, Price, Team ID & Statistic ID

```
CREATE OR REPLACE PROCEDURE print details(p id Player.PlayerID%type)
IS
       P PlayerName Player.PlayerName%type;
       P Role Player.Role%type;
       P_Age Player.Age%type;
       P Price Player. Price % type;
       P_TeamID Player.TeamID%type;
       P SID Player.SID%type;
       inval player exception;
BEGIN
       if p id <1 then
       raise inval player;
       ELSE
       SELECT PlayerName, Role, Age, Price, TeamID, SID into P PlayerName, P Role,
      P Age, P Price, P TeamID, P SID FROM Player where PlayerID=p id;
       DBMS OUTPUT.PUT LINE('PlayerName : '|| P PlayerName);
       DBMS OUTPUT.PUT LINE('Role: '||p Role);
       DBMS_OUTPUT.PUT_LINE('Age : '||p_Age);
       DBMS OUTPUT.PUT LINE('Price: '||P Price);
       DBMS_OUTPUT.PUT_LINE('TeamID : '||P_TeamID);
       DBMS OUTPUT.PUT LINE('SID: '||P SID);
       END IF;
EXCEPTION
        WHEN inval player THEN
          dbms output.put line('invalid player ID');
        WHEN no data found THEN
          dbms output.put line('No such player!');
        WHEN others THEN
          dbms output.put line('Error!');
END;
```

Declaration:

```
DECLARE

p_id Player.PlayerID%type:=:Player_id;

BEGIN

print_details(p_id);

END
```
